MANURE SPREADER
M28 / M34
Serial Numbers above 1071
**A Hook-up to Manure Spreader**

**NOTE:** Stop the tractor engine, place all controls in neutral, set park brake before dismounting.

1. Connect and properly secure to tractor drawbar.
2. Connect PTO driveline to tractor.
3. Connect the Flow Control cable plugs.
4. Connect the Electrical Light plug.
5. Connect the Hydraulics.
6. Raise, adjust hitch jack 90º to storage position, or relocate to alternate side storage location.

**PTO: Connect the PTO Driveline**
- Check that the PTO driveline telescopes easily and the shield rotates freely
- Attach the driveline to tractor by:
  - Retracting the locking collar
  - Slide the yoke over the shaft
  - Push yoke until lock collar clicks into position

**Connect Flow Control**
- Connect the cable plug ends from the flow control box to the valve assembly.

**Connect the Hyd. lines**
- Clean off couplers on hose & tractor with cloth
- Remove plugs & insert couplers
- Ensure pressure & return lines are matched up on same valve bank

**NOTE:** Always check the floor drag chain and slats to make sure they are not frozen to the bottom of the bed.
- It is recommended to make sure chains and table floor are operating properly before loading the spreader.

**B Loading the Manure Spreader**

1. Fully close the rear hydraulic gate.
   **NOTE:**
   - Always check the floor drag chain and slats to make sure they are not frozen to the bottom of the bed.
   - It is recommended to make sure chains and table floor are operating properly before loading the spreader.

2. Load the Spreader.
   **NOTE:**
   - The moisture content will determine how full it can be loaded. Refer to the specifications for capacity.
   - Do not heap load such that manure is allowed to fall off spreader during transporting on roadways.
   - Solid manure can generally be loaded level to slightly heaped. High moisture materials may limit loading.
   - Use front mesh cover when loading wet, slurry materials. When spreading coarser material, mesh cover may be removed for visibility, if desired.
1. Start up the rear beaters (PTO) and bring up to speed.

2. Fully open rear gate all the way to the top.

3. Start the table floor: Turn on Control Box. Turn on the hydraulics used to start the table floor moving. Adjust speed with the Flow Control Dial.
   (A typical starting speed on the flow control dial is 40, based on spreading cattle manure. Operators may wish to slow this down a bit depending on preference or material being spread.)

   NOTE: - A slower speed results in a finer spread as the beaters have more time to process the material.
   - At the end of the day, turn off the Control Box power switch to prevent possibility of battery drain.

4. Travel Speed: - A suggested starting speed is between 4-5 mph. This can be adjusted to operator preference.
   The effective spread is roughly 60ft (although thinned out material may cover distances of up to 100ft).

5. IMPORTANT: Lower Gate as Load Decreases

   DANGER: When the load decreases, it is strongly recommended to lower the rear gate about 1/3 of the way down to prevent debris from being projected towards the front. (Normally, the load itself blocks possible manure and loose materials from being thrown towards the front. As the load/pile gets reduced, the rear beaters may throw some material forward.)

D Unplugging the Manure Spreader

1. Stop the table floor: Disengage the hydraulics that run the table floor chains and turn off flow control box.

2. Lower RPM: After PTO clutch dis-engages, lower RPM below 500 RPM in order for it to re-engage.

3. Reverse the Table Floor Direction: Reverse the hydraulics used to start the table floor moving in order to back material away from beaters. Stop table after material is backed away from beaters or if pile doesn’t move.

4. Re-start Beaters: Bring beaters back up to regular speed.

5. Start table floor chain: Re-start table floor movement by turning the hydraulics on in the proper direction.

NOTE: If this does not solve the situation, a closer inspection and manual unplugging may be required.

DANGER: Stop the tractor engine and wait for all moving parts to stop before servicing or unplugging.

Maintenance
(Check Machine Daily)
- Check for missing, worn or damaged parts.
- Drivelines, PTO, working points & pins
- Hydraulic Connections & Hoses
- Tires, Hubs & Spindles

* Refer to operators manual for complete safety and operation info.

Warranty 50-51
CONGRATULATIONS Congratulations on your choice of a Degelman M28/M34 Manure Spreader to complement your farming operation. It has been designed and manufactured to meet the needs of a discerning agricultural market for the efficient and uniform spread distribution of manure. Use this manual as your first source of information about this machine. If you follow the instructions given in this manual, your machine will work well for many years.

Safe, efficient and trouble free operation of your Degelman Spreader requires that you and anyone else who will be operating or maintaining the Spreader, read and understand the Safety, Operation, Maintenance and Troubleshooting information contained within this Manual.

Keep this manual handy for frequent reference and to pass on to new operators or owners. Call your Degelman Dealer if you need assistance, information or additional copies of the manual.

OPERATOR ORIENTATION - The directions left, right, front and rear, as mentioned throughout the manual, are as seen from the tractor drivers’ seat and facing in the direction of travel.
Overview

TO THE NEW OPERATOR OR OWNER

The Degelman M28 & M34 Manure Spreaders are designed to efficiently and uniformly spread manure in widths of up to 60 feet in fields. Many of the features incorporated into this machine are the result of suggestions made by customers like you.

It is the owner’s or operator’s responsibility to read this manual carefully to learn how to operate the machine safely and how to set it to provide maximum efficiency. Safety is everyone’s business. By following safe operating practices, a safe environment is provided for the operator and bystanders.

The manual will take you step-by-step through your working day. By following the operating instructions in conjunction with a good maintenance program, your machine will provide many years of trouble-free service.

PRINCIPLES OF OPERATION

The Manure Spreader consists of a smooth walled material trailer with a floor chain drag system that pulls material steadily through a discharge gate at the rear of the machine where the dual vertical beaters process and distribute the material at high speeds in a uniform spread pattern.

The dual rear beaters are directly driven by gearboxes that are connected to the tractor’s PTO through drivelines.

The floor chain drag system is hydraulically controlled and incorporates a “Flow Control System” adjusted by an incremental dial located on an in-cab control box. This controls the speed of which the chains drag material towards the rear beaters. The chain is driven by a hydraulic motor and gearbox located on the rear right-hand side of the spreader.

A rear gate is used to prevent material from packing into the rear beaters while loading and to prevent material from falling out during transport. It is raised and lowered by two hydraulic cylinders.

Spreaders Components

1. Hitch Frame
2. Walking Axle
3. Material Trailer
4. Conveyor Chain/Slat Assembly
5. Rear Gate
6. Beater Assembly
7. Chain Drive/Hyd. Motor/Gearbox
8. PTO Driveline
9. Conveyor Axle
10. Chain Shield
11. Upper Guard
12. Mesh Cover
Why is SAFETY important to YOU?

3 BIG Reasons:

• Accidents Can Disable and Kill
• Accidents Are Costly
• Accidents Can Be Avoided

SAFETY ALERT SYMBOL

The Safety Alert Symbol identifies important safety messages applied to the Manure Spreader and in this manual. When you see this symbol, be alert to the possibility of injury or death. Follow the instructions provided on the safety messages.

The Safety Alert Symbol means:

ATTENTION!
BECOME ALERT!
YOUR SAFETY IS INVOLVED!

SIGNAL WORDS

Note the use of the Signal Words: DANGER, WARNING, and CAUTION with the safety messages. The appropriate Signal Word has been selected using the following guidelines:

DANGER: Indicates an imminently hazardous situation that, if not avoided, WILL result in death or serious injury if proper precautions are not taken.

WARNING: Indicates a potentially hazardous situation that, if not avoided, COULD result in death or serious injury if proper precautions are not taken.

CAUTION: Indicates a potentially hazardous situation that, if not avoided, MAY result in minor or moderate injury if proper practices are not taken, or, serves as a reminder to follow appropriate safety practices.
SAFETY

YOU are responsible for the safe operation and maintenance of your Degelman Manure Spreader. YOU must ensure that you and anyone else who is going to operate, maintain or work around the Spreader be familiar with the operating and maintenance procedures and related SAFETY information contained in this manual. This manual will take you step-by-step through your working day and alerts you to all good safety practices that should be adhered to while operating this equipment.

Remember, YOU are the key to safety. Good safety practices not only protect you but also the people around you. Make these practices a working part of your safety program. Be certain that EVERYONE operating this equipment is familiar with the recommended operating and maintenance procedures and follows all the safety precautions. Most accidents can be prevented. Do not risk injury or death by ignoring good safety practices.

- Manure Spreader owners must give operating instructions to operators or employees before allowing them to operate the Spreader, and at least annually thereafter.

- The most important safety device on this equipment is a SAFE operator. It is the operator’s responsibility to read and understand ALL Safety and Operating instructions in the manual and to follow these. All accidents can be avoided.

- A person who has not read and understood all operating and safety instructions is not qualified to operate the machine. An untrained operator exposes himself and bystanders to possible serious injury or death.

- Do not modify the equipment in any way. Unauthorized modification may impair the function and/or safety and could affect the life of the equipment.

- Think SAFETY! Work SAFELY!

GENERAL SAFETY

1. Read and understand the Operator’s Manual and all safety signs before operating, maintaining or adjusting the Manure Spreader.

2. Install and properly secure all shields and guards before operating. Use hitch pin with a mechanical locking device.

3. Have a first-aid kit available for use should the need arise and know how to use it.

4. Have a fire extinguisher available for use should the need arise and know how to use it.

5. Wear appropriate protective gear. This list includes but is not limited to:
   - A hard hat
   - Protective shoes with slip resistant soles
   - Protective glasses or goggles
   - Heavy gloves
   - Wet weather gear
   - Hearing protection
   - Respirator or filter mask

6. Clear the area of people, especially small children, and remove foreign objects from the machine before starting and operating.

7. Do not allow riders.

8. Stop tractor engine, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.

9. Review safety related items with all operators annually.
The Manure Spreader should always be parked on a level, dry area that is free of debris and foreign objects. Follow this procedure when attaching:

1. Clear the area of bystanders and remove foreign objects from the machine and working area.
2. Make sure there is enough room to back the tractor up to the hitch pole.
3. Start the tractor and slowly back it up to the hitch point.
4. Stop the tractor engine, place all controls in neutral, set park brake and remove ignition key before dismounting.
5. Use the hitch pole jack to raise or lower the pole to align with the drawbar.
6. Install a drawbar pin with provisions for a mechanical retainer such as a Klik pin. Install the retainer.
7. Install a safety chain between the tractor drawbar and the hitch pole.
8. Connect PTO driveline to tractor.
10. Connect the Electrical Light plug.
11. Connect the hydraulics. To connect, proceed as follows:
   - Use a clean cloth or paper towel to clean the couplers on the ends of the hoses. Also clean the area around the couplers on the tractor.
   - Remove the plastic plugs from the couplers and insert the male ends.
   
   **NOTE:** If the direction of motion is wrong, reverse the couplers.
12. Raise the hitch jack and rotate it 90° to place in its stowed position or relocate on jack bushing located on the side frame (see detail below).
13. When unhooking from the tractor, reverse the above procedure.

**NOTE:** Occasionally air may become trapped in the hydraulic circuit, making it necessary to “bleed” the circuit. To perform this operation cycle the hydraulics several times or especially on older tractors, temporarily loosen an easily accessible hose fitting enough to allow any trapped air to escape while cycling the hydraulics. Retighten fitting.
Preparation

**TRACTOR PREPARATION**

Follow this procedure when selecting and preparing a tractor for use with the machine:

1. Use only a tractor of sufficient power and weight to adequately handle the machine. It is recommended that the tractor have at least **180 PTO horsepower** for normal operating conditions.
2. It is recommended to pin the drawbar in its centre draft position.
3. Use only a drawbar pin with provisions for a mechanical retainer such as a Klik pin. Always install the retainer.
4. Always attach a safety chain between the tractor and the machine to prevent unexpected separation.

**IMPORTANT:** Do not use on a tractor equipped with a PTO shaft adapter to prevent mismatching of PTO speeds and over telescoping of driveline.

5. The drawbar pin to 1000 PTO shaft end dimension should be either:
   - **16 inches** for **1-3/8”**, 21 spline PTO models
   - **20 inches** for **1-3/4”**, 20 spline PTO models

6. The front PTO bearing holder position should be either:
   - **A-B** Forward for **1-3/8”, 20 spline PTO models**
   - **B-C** Rear for **1-3/4”, 21 spline PTO models**

WARNING: The front PTO driveline is an equal angle driveline that requires proper positioning to prevent damage or failure.

**WARNING:** Do not use on a tractor equipped with a PTO shaft adapter to prevent mismatching of PTO speeds and over telescoping of driveline.

**SPREADER PREPARATION**

Although there are no operational restrictions on the Manure Spreader when it is new, there are some mechanical checks that must be done to ensure the long term integrity of the unit. When using the machine for the first time, follow this procedure:

**IMPORTANT:** It is extremely important to follow all of the procedures especially those listed in the “Before using” section below to avoid damage:

A. Before using:

1. Read Safety Info. & Operator’s Manual. Do not operate the spreader until the safety precautions in this manual and the decals on the spreader have been read and understood by the operator.
2. Check for proper assembly and adjustment and make sure all bolts are tight. All bolts were checked at the factory when assembled but need to be checked again as vibrations in shipment may loosen them slightly.
3. Complete steps in “Pre-Operation Checklist”.
4. Lubricate the machine completely. Refer to the Lubrication section of this manual (p.14). The initial grease was applied at the factory but proper maintenance is the user’s responsibility and must begin before the first use.

   **NOTE:** Ensure drivelines are properly lubricated.

5. Confirm Front PTO driveline/tractor hitch distance settings. (refer to Tractor Preparation” steps 5 & 6)
6. Operate the machine slowly for a period of time to run the chains in and confirm that all parts work freely.

B. After operating for 2 hours:

1. Re-torque wheel bolts.
2. Check torque on the driveline cut-out clutch bolt (taper pin). Tighten to 75 ft-lbf (102 N·m)
3. Check all hardware. Tighten as required.
4. Check all hydraulic system connections. Tighten if any are leaking.
5. Tighten chain.

C. After operating for 8 hours:

1. Repeat Step B.
2. Go to the service schedule as outlined in the “Service & Maintenance” section.

---

**Recommended Wheel Bolt Torque Specs:**

- **280-300 ft·lbs (380-405 N·m)** dry
- **220-240 ft·lbs (300-325 N·m)** lub.

**Note:** Recheck torque on wheel bolts after a couple of hours, and the following day.
OPERATING SAFETY

1. Read and understand the Operator’s Manual and all safety signs before using.

2. Stop tractor engine, place all controls in neutral, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.

3. Keep hands, feet, hair and clothing away from all moving and/or rotating parts.

DANGER

ROTATING PARTS

KEEP AWAY!

DO NOT OPERATE WITHOUT:

- All drivelines, tractor and equipment shields in place.
- Drivelines securely attached at both ends.
- Driveline shields that turn freely on driveline.

4. Do not allow riders on the Manure Spreader or tractor during operation or transporting.

5. Keep all shields and guards in place when operating.

6. Clear the area of all bystanders, especially children, before starting.

7. Be careful when working around or maintaining a high-pressure hydraulic system. Ensure all components are tight and in good repair before starting.

8. Clean all reflectors, lights and the SMV sign (if applicable) before transporting on a highway or public road. Be sure to check with local highway authorities and comply with their lighting requirements.

9. Stay well back from machine when operating to prevent being hit by flying rocks and debris. Keep others a minimum of 500 ft (150m) away.

DANGER

THROWN OBJECTS

CAN CAUSE SERIOUS INJURY OR DEATH

KEEP AWAY!

- Always keep bystanders and coworkers a minimum of 500 ft (150m) away.

PRE-OPERATION CHECKLIST

It is important for both personal safety and maintaining the good mechanical condition of the machine that this pre-operational checklist be followed.

Before operating the machine and each time thereafter, the following areas should be checked off:

- Lubricate the machine completely. Refer to the schedule outlined in the “Service & Maintenance Section” of this manual.
- Use only a tractor of adequate power (180hp minimum) and weight to handle the spreader.
- Ensure that the machine is properly attached to the tractor using a drawbar pin with provisions for a mechanical retainer. Make sure that a retainer such as a Klik pin is installed.
- Ensure the safety chain on the hitch is installed.
- Check tires and ensure that they are inflated to the specified pressure: 65 psi (450 kPa) or 58 psi (400 kPa) for large tire option.
- Check oil level in the tractor hydraulic reservoir. Top up as required.

WARNING: Use extreme care when working around a high pressure hydraulic system. Make sure all connections are tight and all components are in good repair. Wear hand and eye protection when searching for suspected leaks.

- Inspect all hydraulic lines, hoses, fittings and couplers for tightness. Tighten if there are leaks. Use a clean cloth to wipe any accumulated dirt from the couplers before connecting to the tractor’s hydraulic system.
- Inspect all moving and rotating parts. Remove any debris that has become entangled in them.
- Make sure that all guards and shields are installed and secured in position.
- Check the oil level in the gearboxes. Top up as required.
- Insure that the PTO driveline is securely attached on both ends and can telescope easily. Check that the PTO driveline shield rotates freely.
Operation

LOADING

**IMPORTANT:** When parking the spreader for loading, put the tractor in PARK or NEUTRAL and apply the parking brake.

1. Fully Close Rear Hydraulic Gate

**NOTES:**
- It is unlawful to allow any manure spillage to occur on public roadways. Do not heap load such that manure is allowed to fall off spreader during transporting on roadways.
- Always check the floor drag chain and slats to make sure they are not frozen to the bottom of the bed. Operating the spreader when the slats or chain are frozen to the bed may cause damage. Also make sure there are no lumps of manure frozen to the floor.
- It is recommended to make sure chains and table floor are operating properly before loading the spreader.

2. Load the Spreader - The moisture content will determine how full it can be loaded. Refer to the Specifications for capacity. Solid manure can generally be loaded level to slightly heaped. High moisture materials are heavier and may limit loading.

- Use front mesh cover when loading wet, slurry materials. Remove mesh cover for visibility, if desired, when spreading for coarser material.

UNLOADING

**EXCESSIVE VIBRATION**

CAN CAUSE SERIOUS DAMAGE, INJURY, OR DEATH

* If abnormal vibrations occur, shut down machine, wait for all moving parts to stop, inspect machine, drivelines, and rear beaters for missing, jammed, or damaged components.

**DANGER:** If, at any time, abnormal vibrations occur, **shut down machine**, wait for all moving parts to stop, inspect machine, drivelines, and rear beaters for missing, jammed, or damaged components.

**IMPORTANT:** Ensure all items under Operating Safety are followed and ensure all bystanders are a minimum of 500 ft (150m) away before operating!

1. Start up the Rear Beaters - Start the PTO and get the beaters running up to speed.

2. Fully Open Rear Gate - Fully extend the cylinders so the gate is fully open all the way to the top.

**NOTE:** Before starting the table, the operator should get the beaters up to speed and fully open the rear gate. This prevents the spreader from overworking itself from material being pulled up against the rear gate.

3. Start the Table Floor

Turn on power switch on the Control box.

Turn on the hydraulics used to start the table floor moving. This speed is adjusted with the “Flow Control Dial”.

The flow control dial adjusts the “table speed” at which material is being pulled towards the rear beaters. The slower the speed - the finer the spread as the rear beaters have more time to “process” the material. The typical starting speed on the flow control dial is 40 (based on spreading cattle manure). Operators may wish to slow this down a depending on preference or material being spread.

**Note:** At the end of the day it is recommended to turn off the power switch on the “Flow Control Box” to prevent possibility of battery drain.

4. Travel Speed - A suggested starting speed is between 4-5 mph. This can be adjusted to operator preference.

The effective spread is roughly 60ft (although thinned out material may cover distances of up to 100ft).

5. Lower Gate as Load Decreases

**DANGER:** Normally, the load itself blocks manure and loose materials from being thrown towards the front. As the load/pile gets reduced, the rotation of the rear beaters can throw some material forward, therefore it is strongly recommended to lower the rear gate about 1/3 of the way down to prevent debris from being projected towards the front.

**IMPORTANT:** Ensure all items under Operating Safety are followed and ensure all bystanders are a minimum of 500 ft (150m) away before operating!

1. Start up the Rear Beaters - Start the PTO and get the beaters running up to speed.

2. Fully Open Rear Gate - Fully extend the cylinders so the gate is fully open all the way to the top.
Operation

⚠️ **WARNING:** Stop tractor engine, place all controls in neutral, set park brake, remove ignition key and wait for all moving parts to stop before servicing, cleaning, adjusting, repairing or unplugging.

UNPLUGGING

The following is a recommended procedure that may help if the manure spreader becomes plugged or the PTO disengages:

1. **Stop the Table Floor**
   Disengage the hydraulics on that run the table floor chains and turn off the flow control box.

2. **Lower RPM**
   After the PTO clutch dis-engages, the RPM has to be lowered below 500 RPM in order for it to re-engage.

3. **Reverse the Table Floor Direction**
   Reverse the hydraulics used to start the table floor moving in order to back material away from beaters. Stop table after material is backed away from beaters or if pile doesn’t move.

4. **Re-start Beaters**
   Bring beaters back up to regular speed.

5. **Start Table Floor Chain**
   Re-start the table floor moving again by turning the hydraulics on in the proper direction.

If this above procedure does not solve the situation, closer inspection and possible manual unplugging may be required. Make sure to stop tractor and wait for all moving parts to stop before servicing or unplugging.

FREEZING WEATHER OPERATION

- Before loading in freezing weather, make sure the apron chains and slats are not frozen to the floor, the spreader beaters are free to rotate and the rear gate moves freely up and down.
- At end of use, completely empty the last of the spreader contents. Clean any remaining debris from the spreader, the main drive, and the rear gate.
- Ensuring area is clear, slowly engage the PTO & run the spreader for a few minutes to clean out manure debris and to allow any remaining manure and the spreader to freeze dry.
- Run rear gate up and down to clean the gate slides. Park spreader with the gate halfway open.

OPTIONAL MATERIAL TRAILER USAGE

This manure spreader may also be used as a material trailer by removing the rear beater/frame assembly.

⚠️ **WARNING:** Stop tractor engine, place all controls in neutral, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.

1. **Disconnect/Remove rear Driveline**
   Before removing the rear frame assembly, the rear driveline must be disconnected and removed. Store in a safe location.

2. **Disconnect (5) bolts on both sides (10 total).**

3. **Securely wrap a chain around rear beaters (above center of gravity).**

4. **With the aid of a front end loader, the “Rear Frame Assembly” will then lift off. Store in a suitable, safe location.**

5. **The unit should now be ready to use as a material trailer/wagon.**
Transporting & Storage

⚠️ TRANSPORT SAFETY

- Read and understand ALL the information in the Operator’s Manual regarding procedures and SAFETY when operating the spreader in the field/yard or on the road.
- Check with local authorities regarding machine transport on public roads. Obey all applicable laws and regulations.
- Always travel at a safe speed. Use caution when making corners or meeting traffic.
- Make sure the SMV (Slow Moving Vehicle) emblem and all the lights and reflectors that are required by the local highway and transport authorities are in place, are clean and can be seen clearly by all overtaking and oncoming traffic.
- Clean off machine to ensure loose debris/materials do not fall from spreader while in transport.
- Keep to the right and yield the right-of-way to allow faster traffic to pass. Drive on the road shoulder, if permitted by law.
- Always use hazard warning flashers on tractor when transporting unless prohibited by law.
- Always use a pin with provisions for a mechanical retainer and a safety chain when attaching to a tractor or towing vehicle.

⚠️ STORAGE SAFETY

- Store unit in an area away from human activity.
- Do not permit children to play around the stored unit.

STORAGE

After the season’s use, completely inspect all major systems of the machine. Repair or replace any worn or damaged components to prevent unnecessary down time at the beginning of next season.

Since the unit can be used in extremely adverse conditions during the season, the machine should be carefully prepared for storage to ensure that all dirt, mud, debris and moisture has been removed.

Follow this procedure when preparing to store:

1. Wash the entire machine thoroughly using a water hose or pressure washer to remove all dirt, mud, debris or residue. Manure is acidic and will damage paint and cause rusting of metal components.
2. Inspect all moving or rotating parts to see if anything has become entangled in them. Remove the entangled material.
3. Lubricate all grease fittings to remove any moisture in the bearings.
4. Run the machine slowly for 1 minute to distribute lubricant to all surfaces.
5. Inspect all hydraulic hoses, fittings, lines, couplers and valves. Tighten any loose fittings. Replace any hose that is badly cut, nicked or abraded or is separating from the crimped end of the fitting.
6. Touch up all paint nicks and scratches to prevent rusting.
7. Oil the exposed rams on the hydraulic cylinders to prevent rusting.
8. Select an area that is dry, level and free of debris.

⚠️ TRANSPORT HEIGHT

**WARNING:** Always check local transport height restrictions and confirm clearances before transporting.

We recommend lowering and securing the front guard assembly before transport:

1. Remove top hardware (both sides). Swing down front guard and re-attach hardware.
2. Secure front guard as required.
3. **IMPORTANT:** Properly re-install front guard before use.

We recommend lowering and securing the front guard assembly before transport:

1. Remove top hardware (both sides). Swing down front guard and re-attach hardware.
2. Secure front guard as required.
3. **IMPORTANT:** Properly re-install front guard before use.
Service & Maintenance

HYDRAULIC HOSE INSTALLATION TIPS

The following tips are to help you identify some possible problem areas in the installation of hydraulic hoses.

1. Ensure hoses are not twisted during installation as this may weaken the hose. Also, the pressure in a twisted hose may loosen fittings or connections.

2. Allow sufficient bend radius in hoses when installing to prevent lines from collapsing and flow becoming restricted.

3. When installing hoses in an area of movement or flexing, allow enough free length for motion and to ensure fitting connections are not stressed.

4. Ensure hoses are properly clamped and secured in position after routing is complete to provide a cleaner installation and prevent possible damage or hazards.
HYDRAULIC FITTING INSTALLATION

The following info is to help you identify and properly install some of our standard hydraulic fittings.

### SAE (JIC) 37° Flare

JIC fittings - Metal-to-metal sealing type fittings featuring a 37° flare (angle of sealing surface) and straight UNF (United National Fine) Threads.

<table>
<thead>
<tr>
<th>Dash</th>
<th>Thread Size</th>
<th>Torque - lb.ft (N.m)</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

#### Tightening JIC 37° Flare Type Fittings
1. Check flare and flare seat for defects that might cause leakage.
2. Align fittings before tightening. Lubricate connections & hand tighten swivel nut until snug.
3. Using two wrenches, torque to values shown in table.

**Alternate Installation Method**

3. Using two wrenches. Place one wrench on the fixed connector body at a clock position of 6 o'clock.
4. Place the second wrench on the second connection as close to the 3 o'clock position as possible.
5. Tighten by rotating the second connection firmly to at least the 4 o'clock position, but no more than the 7 o'clock position. Typically, the larger the fitting size the less rotation required.

### ORFS (O-Ring Face Seal)

ORFS fittings use an O-ring compression method to seal. This method offers a high level of sealing along with good vibration resistance. Male fittings include an O-ring located in a groove on the flat face. Female fittings feature a flat face and UNF straight threaded swivel nut.

The **Torque** method is recommended for ORFS installation.

#### Tightening ORFS (O-Ring Face Seal) Fittings
1. Inspect components and ensure the O-Ring seal is undamaged and properly installed in the groove of the face seal. Replacing the O-Ring may be necessary.
2. Align, thread into place and hand tighten.
3. Tighten to proper torque from the table shown above.

**Note:** A DASH size refers to a diameter of a hose (inside) or of a tube (outside) measured in 1/16” increments. For example, a **Hose** specified as dash 8 or -8 would have an **inside** diameter of 8/16” or 1/2”.

Alternatively, a **Tube** specified as dash 8 or -8 would have an **outside** diameter of 8/16” or 1/2”.

### ORB (O-Ring Boss)

Male ORB fittings have straight UNF threads, a sealing face and an O-ring. The female fittings are generally found in the ports of machines and feature straight threads, a machined surface, and a chamfer to accept the O-ring. Sealing is achieved through the compression of the male O-ring against the chamfered sealing face of the female fitting.

#### Tightening ORB (O-Ring Boss) Fittings

- **Non-Adjustable Port End Assembly**
  1. Inspect the components to ensure that male and female threads and sealing surfaces are free of nicks, burrs, scratches, or any foreign material.
  2. Ensure O-Ring seal is properly installed and undamaged.
  3. Lubricate threads and O-ring to help the O-ring slide past the port entrance corner and avoid damaging it.
  4. Screw the fitting into position tighten to proper torque value from the table shown above.

- **Adjustable Port End Assembly**
  1. Inspect the components to ensure male & female threads and sealing surfaces are free of nicks, burrs, scratches, or any foreign material.
  2. Ensure O-Ring seal is properly installed and undamaged.
  3. Lubricate threads and O-ring to help the O-ring slide smoothly into the port and avoid damage.
  4. Loosen back the lock nut as far as possible. Make sure back-up washer is not loose and is pushed up as far as possible.
  5. Screw the fitting into port until the back-up washer or the retaining ring contacts face of the port. Light wrenching may be necessary. Over tightening may damage washer.
  6. To align the end of the fitting to accept incoming tube or hose assembly, unscrew the fitting by the required amount, but not more than one full turn.
  7. Using two wrenches, hold the fitting in desired position and tighten the locknut to the proper torque value from the table located above.
  8. Inspect to ensure that O-ring is not pinched and that washer is seated flat on the face of the port.
MAINTENANCE SAFETY

- Review the Operator’s Manual and all safety items before working with, maintaining or operating the Manure Spreader.
- Stop the tractor engine, place all controls in neutral, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.
- Keep hands, feet, clothing and hair away from all moving and/or rotating parts.
- Clear the area of bystanders, especially children, when carrying out any maintenance and repairs or making adjustments.
- Place safety stands or large blocks under the frame before removing tires or working beneath the machine.
- Be careful when working around or maintaining a high-pressure hydraulic system. Wear proper eye and hand protection when searching for a high-pressure hydraulic leak. Use a piece of wood or cardboard as a backstop when searching for a pin hole leak in a hose or a fitting.
- Always relieve pressure before disconnecting or working on hydraulic system.
- When a guard is opened or removed for servicing, be sure to install or close it before starting.

GREASING

1. Use only a hand-held grease gun for all greasing.
2. Wipe grease fitting with a clean cloth before greasing, to avoid injecting dirt.
3. Replace and repair broken fittings immediately.
4. If fittings will not take grease, remove and clean thoroughly. Also clean lubricant passageway. Replace fitting if necessary.
5. Inject grease until you see grease being expelled from the bearing or bushing areas.

FLUIDS AND LUBRICANTS

2. Gearbox Oil: Use SAE 85W90 gear oil.
3. Storing Lubricants: Operate at top efficiency by using clean lubricants. Use clean containers for all lubricants. Store them in an area protected from dust, moisture and other contaminants.

SAFETY - DECALS

- Keep safety decals & signs clean and legible at all times.
- Replace safety decals and signs that are missing or have become illegible.
- Replaced parts that displayed a safety sign should also display the current sign.
- Safety decals or signs are available from your Dealer Parts Department. Safety decals will be available upon request.

SERVICE INTERVALS

**CAUTION:** Machine may be shown with guard(s) opened for illustrative purposes only. Close all guards before using.

- **8 Hrs.** Over Running Clutch
- **40 Hrs.** Cross Joints (both ends)
- **8 Hrs.** Guard Bearings
- **8 Hrs.** Over Running Clutch (*5 pumps)
- **Hitch (both sides)**
- **8 Hrs.** Slider Shaft/Tube
- **Over Running Clutch (5 pumps)**

**LUBE AFTER EVERY 8 HRS.**

### Initial & after every 8 Hrs.
- check for hydraulic fluid leaks and damaged hoses
- check tire pressure (65 psi) / Optional Tires (58 psi)
- initial wheel bolt torque (recheck - 2 hrs/8hrs):
  - Dry: 280-300 ft-lbs
  - Lube: 220-240 ft-lbs
- grease front driveline:
  - Over running clutch - (5 pumps)
  - slider shaft/tube - center
  - cross joint fittings - both ends
  - guard bearings - both ends
  - front hitch - both sides

### 40 Hrs./Weekly
- grease rear driveline:
  - cross joint fittings - both ends
  - slider shaft/tube - center
- grease chain axle endcaps - front/rear
- check gearbox oil levels - 2 gearboxes

- Hydraulic Motor Gearbox - Rear right hand side
  - Oil should be level with middle of sight glass.
  - Add as required through top plug.

- Rear Beater PTO Gearbox - Rear, under beaters
  - Oil should be level with middle of sight glass.
  - Add as required through top plug.
  - Oil may take awhile to distribute in casing, recheck level after 30-40 min. and repeat if necessary.

### Annually
- check general hardware/bolt tightness
- check/adjust chain tension

- **Check/Adjust Axle Support**
- **Grease Chain Axle Caps** (front/rear)
- **Check/Adjust Chain tension (both sides)**
- **Check Gearbox** Fill if required
- **40 Hrs.** Check Gearbox Fill if required
- **Annually**
WARNING: Stop tractor engine, place all controls in neutral, set park brake, remove ignition key and wait for all moving parts to stop before servicing, adjusting, repairing or unplugging.

GENERAL MAINTENANCE

1. Regularly remove buildup of manure/debris.
2. Vibration during operation may cause fasteners to loosen. Periodically, check all hardware and retighten if necessary.
3. Keep the rear beater paddles and driveline clean. Remove all twine, wire, or other material that may wrap around the beaters or drivelines.
4. On occasion, pressure wash the spreader. Manure is acidic and will damage paint and cause rusting of metal components. Use touch up paint on any chips or scratches.

BEATER PADDLE/PIN REPLACEMENT

Removing/inspecting the rear beater paddles:
1. Remove and inspect pin bolts and lock nuts.
2. Remove pin and inspect for damage and/or excessive wear.
3. Remove paddle. Inspect bushing & seals for damage and/or excessive wear. Note: It is recommended to replace all three paddles from a row at the same time to maintain proper balance of beater assembly.
4. Replace damaged components and hardware as needed. Reverse procedure for re-installation.
5. When installing/replacing seals, lightly lubricate the seal lips with a bit of grease before insertion.

BEATER ASSEMBLY REPLACEMENT

WARNING: If installing/replacing complete beater assembly, ensure bottom plate timing mark positions of both beater assemblies are opposite (180°) to avoid paddle contact and damage.

DRIVELINE REMOVAL - CUT-OUT CLUTCH

The front center driveline is secured onto the driveshaft by tightening a special “Cone-Clamp” bolt located on the Cut-Out Clutch. There is a certain procedure for loosening that bolt described below:

1. Insert a punch in the hole opposite the bolt to make contact with the bolt end. Use a hammer to strike the punch approx three times before loosening bolt.
2. Try removing the bolt as usual, if hard to turn, repeat step 1.
3. Remove driveline from shaft.
4. When re-installing driveline, re-torque this bolt to 75 ft-lbf (102 N·m). Check and re-torque again after 2 hrs.

REPLACING PLASTIC FLOOR SKIDS

When replacing the plastic floor skids, it is suggested to remove and replace them one at a time to allow the remaining two to help support the drag slats and chain.

1. Grind off the weld holding the ends of the key located on the center skid supports.
2. Remove the key and keep for re-installing new skid.
3. With the key removed, slide out the plastic floor skid from the rear of the machine.
4. Re-install new plastic floor skid and the key in the center support.
5. Repeat above steps for the remaining plastic skids.
6. Tack-weld the ends of the keys back in place.
Service & Maintenance

**DRAG CHAIN**

1. Occasionally check the Drag Chain for any bent or damaged slats. It is important to straighten or replace any damaged slats immediately.

2. The drag chain tension should be checked and adjusted on occasion.

**CENTER STOP ADJUSTMENT**

IMPORTANT: Whether adjusting chain tension, replacing a slat, or adjusting the Center Support allow a 1/16” to 1/8” final Gap.

**ADJUSTING CHAIN TENSION**

If drag chain has slack, tightening is required:

1. Loosen the jam nut. (Both sides of machine)

2. When tightening, hold middle nut with wrench and tighten end of rod in a clockwise direction.

3. a) Starting on one side, tighten the threaded rod a few turns.

   b) Repeat on opposite side of machine to evenly tighten chain tension.

   c) Repeat this procedure 2-3 times until moderate chain tension is achieved.

   d) After advancing the chain with this procedure, check the chain slats at the rear of the machine to ensure they are straight across.

   Note: You may need to measure the distance from the round cap screw to the end of the slot. Compare this measurement with the opposite side measurement. Ensure the difference is less than 1/2” MAX to prevent excessive skewing of chain slats.

4. Re-tighten jam nut securely against middle nut.

5. Repeat on other side.

6. Re-adjust center support on front conveyor axle.

**REPLACING A DRAG CHAIN SLAT**

To remove and replace one or more chain slats, follow this procedure:

1. Fully loosen the chain tightener bolts on both side tightener and center support blocks to allow maximum slack in chain.

2. With slackened chain, skew/offset existing damaged chain slat to allow slat holder plates to be removed from the slat ends.

3. Place end of new slat onto existing slat holder plate and skew/offset into position.

4. Repeat with remainder of damaged slats.

5. When finished replacing slats, fully re-tighten the side tightener blocks and firm up center support block against front conveyor axle.

6. Ensure front shield is closed.

7. Check chain tightness after operating and ensure the slats are running straight (not skewed). Adjust and tighten as required.
Service & Maintenance

WHEEL HUB REPAIR

**DISASSEMBLY**

1. Remove dust cap.
2. Remove cotter pin from nut.
3. Remove nut and washer.
4. Pull hub off spindle.
5. Dislodge the inner cone bearing and dust seal.
6. Inspect cups that are press fitted into hub for pits or corrosion and remove if necessary.
7. Inspect and replace defective parts with new ones.

**ASSEMBLY**

1. If cups need replacing, be careful to install them gently and evenly into hub until they are fully seated.
3. Install inner cone and dust seal as illustrated.
4. Position hub onto spindle and fill surrounding cavity with grease.
5. Assemble outer cone, washer and nut.
6. Tighten nut while rotating hub until there is a slight drag.
7. Turn nut back approximately 1/2 turn to align cotter pin hole with notches on nut.
8. Install cotter pin and bend legs sideways over nut.
9. Fill dust cap half full of grease and gently tap into position.
10. Pump grease into hub through grease fitting until lubricant can be seen from dust seal.

</tr>
</tbody>
</table>

**Wheel Tightening Procedure**

1. Install and hand tighten nuts/bolts.
2. Tighten to approx. 20% **Torque** value using the **Bolt Star or CrissCross** patterns shown above.
3. Tighten to **Full Torque** value using the **Star or CrissCross** pattern.
4. If applicable, install **Rear Locknuts** using Wheel **Torque Values**.

**TIRE SAFETY**

1. Failure to follow proper procedures when mounting a tire on a wheel or rim can produce a blow out which may result in serious injury or death.
2. Do not attempt to mount a tire unless you have the proper equipment and experience to do the job.
3. Have a qualified tire dealer or repair serviceman perform required tire maintenance.
1. Support and secure beater. Ensure the beater assembly is in the correct position - timing marks rotated 180° opposite to the second beater's timing marks.

2. **IMPORTANT:** Check the position of the snap rings in the assembled bearing unit. They should be located in the “fixed” position (See fig. 1). On occasion they have may been sent in the default “floating” position from the supplier but must be relocated to the “fixed” position before installation.  
   Note: *Appropriate eye protection should be worn when handling snap rings.*

3. Loosen the locknut almost all the way, with the exception of a few threads to keep it on the sleeve.

4. Push the locknut/sleeve firmly inward against the bearing and hold. While holding, slide the assembly onto the shaft until the bearing housing is in position against the frame (holding the locknut is important so the sleeve doesn’t tighten between the bearing and the shaft while sliding into position).

5. Install the bearing mounting hardware loosely then tighten mounting hardware.

6. Hand tighten the locknut and ensure adapter sleeve no longer rotates.

7. Tighten the locknut 1/3 of a rotation or 120°. A hook spanner or a hammer and punch are commonly used. Torque to 140 lb-ft (190 N·m) if possible.

8. Bend one of the tabs on the circumference of the lockwasher into the nearest notch on the rim of the locknut. If no tabs line up, tighten the locknut slightly. The locknut should not be loosened in order to align the tab with a notch.  
   **Bearings come pre-lubricated with Shell Alvania #3 and require no lubrication upon initial installation.**

9. After final assembly of machine, spin beaters to ensure they spin freely.

   **Note: Do NOT grease spherical bearings - even if grease fitting is present.**

**REMOVAL INSTRUCTIONS**

1. Support and secure beater.

2. To remove the bearing unit from the shaft, raise the bent lockwasher tab, loosen the locknut two or three turns, then tap the nut over its entire circumference with a hammer and punch. Ensure sufficient threads remain engaged as to not damage them. Continue tapping until the adapter sleeve can be moved.

3. Loosen and remove the mounting hardware. Clean outer shaft for easier removal. Slide complete bearing unit off.

4. To remove the bearing insert from the housing, remove one of the snap rings and slide the bearing out.  
   **Appropriate eye protection should be worn when handling snap rings.**
HYDRAULIC CYLINDER REPAIR

PREPARATION

When cylinder repair is required, clean off unit, disconnect hoses and plug ports before removing cylinder.

When removed, open the cylinder ports and drain the cylinder’s hydraulic fluid.

Examine the type of cylinder. Make sure you have the correct tools for the job.

You may require the following tools:
- Proper Seal Kit
- Rubber Mallet
- Screwdriver
- Punch
- Pliers
- Emery cloth
- Torque Wrench

REPAIRING A WIRE RING CYLINDER

1. Retract the rod assembly.
2. Remove the external steel wire ring.
3. Remove any dirt that may have accumulated on the cylinder head.
4. Using the mallet and punch, push the head into the cylinder tube until the internal tube groove is fully exposed. This will also move the internal wire ring into its removal position.
5. Take the plastic removal ring from the seal kit:
   a) Straighten the ring and remove any kinks or excessive curl to make installation easier and prevent it from falling out.
   b) Insert the removal ring into the internal groove with the feathered end pointing into the tube.
   c) Use a screwdriver or a finger to hold one end of the ring in the groove while fitting the other end of the ring into the groove. The tips should snap in together. Ensure it is secure and fully seated before the next step.

   IMPORTANT: It is important to ensure the removal ring is completely in the groove before pulling the rod out. If the ring sticks out it will get stuck between the head and tube.

6. a) Extend the rod to pull head out of tube. If the rod does not pull out easily, push the head back in and ensure the ring is properly in the groove. Replace ring if necessary.

   Note: Excessive force will not overcome a jammed ring and could damage the cylinder.
   b) Completely remove rod and head from tube.

7. Remove plastic removal ring from the cylinder tube.
8. Remove locknut, piston and head from rod.

9. a) Inspect and replace all of the seals with new components.
   b) Inspect the inside of the cylinder barrel, piston, rod and other polished parts for burrs and scratches. Smooth areas as needed with an emery cloth.
   c) During re-assembly of head/gland assembly, leave the outer O-Ring Dual Seal loose on the rod to re-install at a later step.

10. Replace piston and torque the locknut to required value. (Refer to chart below)

11. a) Install the supplied band clamp to compress the inner wire ring on the head/gland assembly so it will fit into the tube.
    Note: Make sure the cam of the band clamp is not overtop of the gap in the ring.

   b) Tighten the band clamp to ensure the wire ring is fully seated. Then, loosen the clamp approx. 1/2 a turn to allow band clamp to slide during final assembly.

12. Lubricate the cylinder tube and piston seals.

13. Insert the piston into the tube. Tap the cylinder head into the tube until the clamp slides over and the inner wire ring is inside the tube.

14. Loosen the clamp and remove.

15. Install the O-Ring Dual seal.

16. Tap the head the rest of the way until the end is flush with the tube.

   IMPORTANT: The head/gland must be inserted until it is flush with the tube to allow the inner wire ring to snap into its seated position in the internal cylinder groove. Failure to insert the head flush as shown will result in the head and rod assembly coming out of the tube when pressure is applied to the cylinder.

17. Pull the rod out to expose the external wire ring groove in cylinder head, and then install the external ring.

18. Before using the cylinder, ensure that you double check your work.
REPAIRING A THREADED HEAD CYLINDER

**Set Screw Style**

**DISASSEMBLY**

1. Loosen Set Screw and turn off end cap.
2. Carefully remove piston/rod/gland assemblies.
3. Disassemble the piston from the rod assembly by removing lock nut.

**NOTE:** **DO NOT** clamp rod by chrome surface.

4. Slide off gland assembly & end cap.
5. Remove seals and inspect all parts for damage.
6. Install new seals and replace damaged parts with new components.
7. Inspect the inside of the cylinder barrel, piston, rod and other polished parts for burrs and scratches. Smooth areas as needed with an emery cloth.

**REASSEMBLY**

1. Reinstall rod through end cap & gland assembly.
2. Secure piston to rod with lock nut. Torque lock nut to proper value (refer to chart on previous page for proper torque value).
3. Lube inside of barrel, piston seals, and gland seals with hydraulic oil.
4. With cylinder body held gently in a vise, insert piston, gland, end cap and rod combination using a slight rocking motion.
5. Apply Loctite anti-seize before installing cylinder end cap.
6. Torque cylinder end cap to 440 lb.ft (600 N.m).
7. Tighten Set Screw on end cap to 6 lb.ft (8 N.m).

**Locking Ring Style**

**DISASSEMBLY**

1. Loosen Locking Ring and turn off end cap.
2. Carefully remove piston, rod and end cap.
3. Disassemble the piston from the rod assembly by removing lock nut.

**NOTE:** **DO NOT** clamp rod by chrome surface.

4. Slide off end cap.
5. Remove seals and inspect all parts for damage.
6. Install new seals and replace damaged parts with new components.
7. Inspect the inside of the cylinder barrel, piston, rod and other polished parts for burrs and scratches. Smooth areas as needed with an emery cloth.

**REASSEMBLY**

1. Reinstall rod through end cap.
2. Secure piston to rod with lock nut. Torque lock nut to proper value (refer to chart on previous page for proper torque value).
3. Thread lock ring fully onto barrel.
4. Lube inside of barrel and piston seals with hydraulic oil.
5. With cylinder body held gently in a vise, insert piston, end cap and rod combination using a slight rocking motion.
6. Turn end cap fully against lock ring then back off end cap to align ports.
7. Tighten Locking Ring against end cap using a punch and hammer.
Troubleshooting

TROUBLESHOOTING

In the following section, we have listed some of the problems, causes and solutions that you may encounter. If you encounter a problem that is difficult to solve, even after having read through this troubleshooting section, please call your local dealer or distributor. Before you call, have this manual and the serial number from your unit ready.

- 246735 - Plug Assembly (1)
- 246725 - Walking Wheel Assembly (2)
- 246734 - Disc, Wear-Nylon (2)
- 131394 - Rim, 26.5 x 20.0 DC - 10H (1)
- 127015 - Valve Stem, TR618A (1)
- 131399 - Tire, 650/55R 26.5 - I-380 (1)
- 131398 - Wheel Assembly, 650/55R 26.5 (4)

**WHEEL COMPONENTS - STANDARD**

Recommended pressure: 65 psi (450 kPa)

- 246725 - Walking Wheel Assembly (2)
- 246735 - Plug Assembly (1)
- 131398 - Wheel Assembly, 650/55R 26.5 (4)
- 131206 - Flat Washer, 1-1/4 (1)
- 118445 - Lock nut, 1-1/4 (1)
- 246734 - Disc, Wear-Nylon (2)
- 131394 - Rim, 26.5 x 20.0 DC - 10H (1)
- 127015 - Valve Stem, TR618A (1)
- 131399 - Tire, 650/55R 26.5 - I-380 (1)
OPTION - LARGER WHEEL/AXLE PACKAGE

Note: Larger wheel option replaces the walking axles and tires only. All other items are the same as the standard tire option (Spindles, wear washers, rod assembly and hardware.)

Walking Axle & Wheel Components

131567 - Wheel Assembly, 750/60 R26 - LH (2)

comes with...

131566 - Tire, 750/60 R26 (1)
131565 - Rim, 26 x 25.0 DC - 10H - STR (1)
127015 - Valve Stem, TR618A (1)

Recommended pressure: 58 psi (400 kPa)

246981 - Walking Wheel Assembly (2)

131568 - Wheel Assembly, 750/60 R26 - RH (2)

comes with...

131566 - Tire, 750/60 R26 (1)
131565 - Rim, 26 x 25.0 DC - 10H - STR (1)
127015 - Valve Stem, TR618A (1)

HUB/SPINDLE COMPONENTS

131396 - Hub/Spindle Assembly (4) comes with...

118158 - Bolt, 3/4 x 7 (2)
131397 - Spindle, S1020 (2)
118422 - Lock Nut, 3/4 (2)
131363 - Dust Seal, CR43771 (1)
131361 - Bearing, Cone - Inner (1)

HUB/SPINDLE (Weigh Scale Option Only)

131768 - Hub/Spindle Assembly (4)
(Note: Only Spindle, Dust Seal, and Spindle Nut components are different)

131760 - Weigh Scale Spindle (2)
131411 - Dust Seal, Weigh Scale Option (1)

131412 - Slotted Nut, 2 UNF (1)

Recommended Wheel Bolt Torque Specs:
280-300 ft-lbs (380-405 N·m) - dry
220-240 ft-lbs (300-325 N·m) - lub.

Note: Recheck torque on wheel bolts after a couple of hours, and following day.
**Hitch Pole Components**

**HITCH POLE COMPONENTS**

- **246700** - Hitch Pole Assy (1)
- **124044** - Hitch Assy, CAT3 with 2” Ball (1)
- **124045** - Ball, Insert 2” (1)
- **124046** - Ball, Insert 1-1/2” Optional (1)
- **118911** - Lock Nut, 1 (2)
- **118266** - Bolt, 1 x 8 (2)
- **118112** - Bolt, 1/2 x 3 (1)
- **246759** - Bushing, Collar 2-1/8 (1)
- **118420** - Lock Nut, 1/2 - Unitorque (1)
- **118304** - Safety Chain Assembly (1)
- **116255** - Safety Chain, Bundle (1)
- **118073** - Bolt, 1 x 3-1/2 UNC GR8 (1)
- **118615** - Flat washer, 1 x 3-1/8 x 1/4 (1)
- **116256** - Safety Chain Assembly (1)
- **118520** - Flat washer, 1 (1)
- **118510** - Lock washer, 1 (1)
- **118464** - Nut, 1 UNC GR8 (1)
- **246751** - Pin, Safety Chain (1)
- **246758** - Spacer Bushing, 3-1/4 (2)
- **246757** - Pin Bushing, 2-1/8 (1)
- **132036** - Jack, Sidewind, 12,000 lbs (1)
- **118005** - Bolt, 3/8 x 1 (2)
- **118511** - Flat washer, 3/8 (2)
- **246723** - Lid, Electrical (1)

**Rear Gate Cylinders**

**REAR GATE CYLINDERS**

- **123056** - Cylinder, Dump - 2 x 72 x 1-1/4 (2)

**Previous Cylinder** - **122570** - Cylinder, Dump - 2 x 72 x 1-1/4 (2)

- **141633** - Port Plug, 9/16 ORB (2)
- **118441** - Lock Nut, 7/8 UNF unitorque (1)
- **122572** - Barrel (1) (comes with Port Plugs)
- **122506** - Open Cap (1)
- **122508** - Lock Ring (1)
- **122581** - Piston (1)
- **122577** - Rod & Pin Eye (1)
- **122521** - Seal Kit (1)

142967 - Manure Spreader (03-October-2019)
REAR GATE COMPONENTS

788601 - Pin, 1-1/4 x 3-5/8 (1)
810280 - Retaining Ring, 1-1/4 (2)
141518 - 90° Elbow, 3/4 JIC-m x 3/4 JIC-f-sw (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
141583 - Adaptor, 3/4 JIC-f-sw x 9/16 ORB (1)
246375 - Rear Gate Assembly (1) (comes with lower flap assembly)

246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118403 - Nut, 3/8 (13)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
810280 - Retaining Ring, 1-1/4 (2)
141518 - 90° Elbow, 3/4 JIC-m x 9/16 ORB (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
141583 - Adaptor, 3/4 JIC-f-sw x 9/16 ORB (1)
788601 - Pin, 1-1/4 x 3-5/8 (1)
810280 - Retaining Ring, 1-1/4 (2)
141613 - 45° Elbow, 3/4 JIC-m x 9/16 ORB (1)
118129 - Bolt, 3/8 x 1-1/4 (4)
246518 - Mon. Cyl Support (2)
118514 - Bolt, 3/8 x 1-1/2 (4)
141501 - Tee, 3/4 JIC-m x m x m (1)
141518 - 90° Elbow, 3/4 JIC-m x 3/4 JIC-f-sw (1)
141583 - Adaptor, 3/4 JIC-f-sw x 9/16 ORB (1)
788599 - Pin, 1-1/4 x 4-3/8 (1)
810280 - Retaining Ring, 1-1/4 (2)
118403 - Nut, 3/8 (13)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118403 - Nut, 3/8 (13)
810280 - Retaining Ring, 1-1/4 (2)
141633 - Plug, Port - 9/16 ORB (1)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
118503 - Lock washer, 3/8 (4)
118501 - Tee, 3/4 JIC-m x m x m (1)
141501 - Tee, 3/4 JIC-m x m x m (1)
118503 - Lock washer, 3/8 (13)
118511 - Flat washer, 3/8 (13)
246371 - Rubber Flap (1)
246370 - Bolt Bar (1)
118136 - Bolt, 3/8 x 1-1/2 (13)
WARNING: The front PTO driveline is an equal angle driveline that requires proper positioning to prevent damage or failure.

Front PTO Bearing Holder

WARNING:
A-B Forward Position for 1-3/8" PTO Driveline
B-C Rear Position for 1-3/4" PTO Driveline

After the Hitch Pole is assembled to the Main Frame, tighten the outer rubber springs to 1-1/2".
Chain & Tightener Components

FRONT CONVEYOR & TIGHTENER COMPONENTS

246449 - Chain Tightener Block (2)

246436 - Wear Pad, Nylon (1)
118511 - Flat Washer, 3/8 (2)
118136 - Bolt, 3/8 x 1-1/2 (2)

118405 - Nut, 1/2 (2)
118504 - Lock Washer, 1/2 (2)
118336 - Grease Fitting (2)
117402 - Capscrew, SHCS 1/2 x 1 (2)
246441 - Bushing, 5 OD (1)
246448 - Scraper (1)
118011 - Bolt, 1/2 x 1-1/2 (2)

118403 - Nut, 3/8 (13)
118417 - Lock Nut, 3/8 (2)
118511 - Flat Washer, 3/8 (2)
118121 - Bolt, 5/16 x 2 (1)
118703 - Lock Nut, 5/16 (1)

118474 - Nut, 1-1/4 (4)
246424 - Conveyor Front Axle (1)
246742 - Center Support Block Assy (1)
246451 - Rod, Chain Adjustment (2)
246307 - Bolt Bar (1)
246371 - Rubber Flap (1)

246743 - Center Support Block Assy (1)

246425 - Conveyor Slat (24) M28 Model
246541 - Chain Assembly - 28 Slat Holder (2) - M34

142803 - Decal, Danger Rotating Part Hazard (2)
143316 - Decal, Danger Lower Gate (1)
143315 - Decal, Danger Excessive Vibration (1)
143306 - Decal, Danger Thrown Objects (1)

118416 - Pin, Cotter, 1/4 x 2 (1)
118403 - Nut, 3/8 (13)
118417 - Lock Nut, 3/8 (2)
246410 - Replacement Chain/ Slat Holder Plate (1)

246411 - Connector Rod, 3/4 (1)
(weld to connector after installation)

118389 - Pin, Cotter, 1/4 x 2 (1)
246412 - Connector Plate, 3/4 (1)
246413 - Connector Link Assembly (1)

IMPORTANT: When installing Center Support
allow a 1/16" to 1/8" Gap

CHAIN ASSEMBLY COMPONENTS

246415 - Chain Assembly - 24 Slat Holder (2) - M28
246541 - Chain Assembly - 28 Slat Holder (2) - M34

IMPORANT: When installing Center Support
allow a 1/16" to 1/8" Gap
Rear Axle & Gearbox Components (SN: 1151 and up)

REAR DRIVE AXLE COMPONENTS (Dual Drive Ready)

810282 - Retaining Ring, Ext 2-3/4 (2)
246853 - Key, 16mm x 20mm x 14-3/8” (1)
246847 - Shaft, Gearbox - Dual Drive (1)

Gearbox/Hyd. Motor Assembly - RH

118011 - Bolt, 1/2 x 1-1/2 (12)
118504 - Lock Washer, 1/2 (12)
118405 - Nut, 1/2 (12)
246845 - Conveyor Dual-Drive Axle (1)

246442 - Holder Assembly, Rear Axle (2)
comes with...
246441 - Bushing, 5 OD (1)

118514 - Flat washer, 5/8 (1)
118508 - Lock Washer, 5/8 (1)
118645 - Bolt, 5/8 x 1-1/4 (1)

170436 - Gearbox Reducer, 38.7:1 Berma (1)
141541 - 90° Elbow, 3/4 JIC-m x 7/8 ORB (2)
118504 - Lock Washer, 1/2 (2)
118181 - Bolt, M12 x 1.75 x 40 P8.8 (2)

226650 - Hyd Motor (1)
comes with...
226651 - Key, 10 x 8 x 45mm (1)

246427 - Bracket, Gearbox Stop (1)

246794 - Shaft, Dual Drive Ready - LH (1)
246796 - Spacer Bushing (1)

117602 - Capscrew, FHCS M16 x 2 x 35 (4)

791148 - Bolt, M16 x 2 x 40 P8.8 (3)
118508 - Lock Washer, 5/8 (3)
Rear Axle & Gearbox Components (SN: up to 1150)

REAR DRIVE AXLE COMPONENTS (Standard Drive)

- Gearbox/Hyd. Motor Assembly - RH
  - 810282 - Retaining Ring, Ext 2-3/4 (1)
  - 118011 - Bolt, 1/2 x 1-1/2 (12)
  - 118504 - Lock Washer, 1/2 (12)
  - 118405 - Nut, 1/2 (12)

- Gearbox/Hyd. Motor Assembly - RH (1)
  - 246442 - Holder Assembly, Rear Axle - RH (1)
  - 246441 - Bushing, 5 OD (1)

- 246802 - Holder Assembly, Rear Axle - LH (1)
  - comes with...

- 246428 - Key, 16mm x 20mm x 6" (1)
  - 246427 - Bracket, Gearbox Stop (1)

- 117602 - Capscrew, FHCS M16 x 2 x 35 (4)

- 170436 - Gearbox Reducer, 38.7:1 Berma (1)
  - 141541 - 90° Elbow, 3/4 JIC-m x 7/8 ORB (2)
  - 118504 - Lock Washer, 1/2 (2)
  - 118181 - Bolt, M12 x 1.75 x 40 P8.8 (2)

- 246649 - Conveyor Drive Axle (1)

- 246651 - Key, 10 x 8 x 45mm (1)
  - 226650 - Hyd Motor (1)
  - comes with...

- 226651 - Hyd Motor (1)
  - comes with...

- 118508 - Lock Washer, 5/8 (3)
  - 118148 - Bolt, M16 x 2 x 40 P8.8 (3)
Rear Dual Drive Conversion Kits

246793 - Dual Drive Conversion Kit
(For Machines with SN: 1151 & up)

Gearbox/Hyd. Motor Assembly - LH
- 246853 - Key, 16mm x 20mm x 14-3/8" (1)
- 246847 - Shaft, Gearbox - Dual Drive (1)
- 246852 - Spacer, 3-1/4 w/slot (1)
- 810282 - Retaining Ring, Ext 2-3/4 (1)
- 118514 - Flat Washer, 5/8 (1)
- 118508 - Lock Washer, 5/8 (1)
- 118645 - Bolt, 5/8 x 1-1/4 (1)

246844 - Dual Drive Conversion Kit
(For Machines with SN: up to 1150)

Gearbox/Hyd. Motor Assembly - LH
- 246849 - Bracket, Gearbox Stop, LH (1)
- 118148 - Bolt, M16 x 2 x 40 P8.8 (3)
- 118508 - Lock Washer, 5/8 (3)
- 118504 - Lock Washer, 1/2 (2)
- 118181 - Bolt, M12 x 1.75 x 40 P8.8 (2)
- 170428 - Gasket, Hyd Motor (1)
- 141541 - 90° Elbow, 3/4 JIC-m x 7/8 ORB (2)

246442 - Holder Assembly, Rear Axle - RH (1)
comes with... 246441 - Bushing, 5 OD (1)
246850 - Gearbox Stop Assembly (1)
comes with hardware...
- 118514 - Flat Washer, 5/8 (1)
- 118508 - Lock Washer, 5/8 (1)
- 118645 - Bolt, 5/8 x 1-1/4 (1)

Note: Only required on older machines that do not already have this stop plate on LH side.

810282 - Retaining Ring, Ext 2-3/4 (2)
- 246853 - Key, 16mm x 20mm x 14-3/8" (2)
- 246847 - Shaft, Gearbox - Dual Drive (2)
- 226650 - Hyd Motor (1)
comes with...
- 226651 - Key, 10 x 8 x 45mm (1)
- 118504 - Lock Washer, 1/2 (2)
- 118181 - Bolt, M12 x 1.75 x 40 P8.8 (2)
- 117602 - Capscrew, FHCS M16 x 2 x 35 (4)
- 170436 - Gearbox Reducer, 38.7:1 Berma (1)
- 117530 - Roll Pin, Double 1/2 x 3-3/4 (2)
- 246845 - Conveyor Dual-Drive Axle (1)
- 246852 - Spacer, 3-1/4 w/slot (1)
Rear Axle Gearbox Components

**INTERNAL GEARBOX COMPONENTS**

170436 - Gearbox Reducer, 38.7:1 Berma (1) comes with:

- 170443 - Bearing, Ball 100x150mm (2)
- 170444 - Retaining Ring, Int. 150mm (2)
- 170445 - Oil Seal, 100 x150x12mm (2)
- 170442 - Gear, Output 110mm (1)
- 170441 - Retaining Ring, Ext. 110mm (1)
- 170438 - Bushing, Keyed 70mm (1)
- 170444 - Retaining Ring, Int. 150mm (2)
- 170441 - Retaining Ring, Ext. - 110mm (1)
- 170413 - Retaining Ring, Int. 80mm (1)
- 170418 - Bearing, Ball 30x80mm (2)
- 170413 - Retaining Ring, Int. 80mm (2)
- 170419 - End Cap, 80mm (2)
- 170420 - Shaft, Pinion Gear - 10 Tooth (1)
- 170421 - Gear, Bevel - 38 Tooth (1)
- 170415 - Key, 18x11x40mm (2)
- 170411 - Shaft, Pinion Gear - 12 Tooth (1)
- 170414 - Gear, 50 Tooth (1)
- 170416 - Bearing, Ball 60x110mm (2)
- 170412 - Retaining Ring, Int. 110mm (2)
- 170417 - End Cap, 110mm (2)
- 170418 - Bearing, Ball 30x80mm (2)
- 170413 - Retaining Ring, Int. 80mm (2)
- 170419 - End Cap, 80mm (2)

170439 - Cover Plate, 10H (1)
170440 - Gasket, Cover Plate - 10H (1)
170442 - Gasket, Hyd Motor-4H (1)
170428 - Gasket, Hyd Motor-4H (1)
170437 - Gearbox Housing (1)
170426 - Plug, Vent/Fill 1 NPT (2)
170427 - Plug, Sight Glass 1 NPT (2)
170421 - Gear, Bevel - 38 Tooth (1)
170413 - Retaining Ring, Int. 80mm (1)

**Additional Components**

- 118197 - Bolt, M8 x1.25 x25mm (10)
- 170425 - Bearing, Ball 50x80mm (1)
- 170422 - Pinion, Input 25 Tooth (1)
- 170425 - Bearing, Ball 50x80mm (1)
- 170423 - Retaining Ring, External - 50mm (1)
- 170436 - Gearbox Reducer, 38.7:1 Berma (1) comes with...
Rear Frame & Beater Components

REAR BEATER FRAME
ASSEMBLY COMPONENTS

WARNING:
When installing/replacing complete beater assembly, ensure bottom plate timing mark positions of both beater assemblies are opposite (180°) to avoid paddle contact and damage.

Upper & Lower (RH/LH)
118026 - Bolt, 5/8 x 2 (4)
118508 - Lock Washer, 5/8 (4)
118407 - Nut, 5/8 (4)

246616 - Frame, Beater RH Side (1)

143306 - Decal, Danger - Thrown Objects (2)

118508 - Lock Washer, 5/8 (2)
118026 - Bolt, 5/8 x 2 (2)
118407 - Nut, 5/8 (2)

Hole for Alignment

246617 - Frame, Beater LH Side (1)

Top & Bottom (LH/RH)
118024 - Bolt, 5/8 x 1-1/2 (12)
118508 - Lock Washer, 5/8 (12)
118407 - Nut, 5/8 (12)

LH Side Only
118123 - Bolt, 1/4 x 1 (2)
118483 - Lock Nut, 1/4 (1)
142135 - SMV Sign (1)
246531 - SMV Sign Bracket (1)

142650 - Decal, Fluorescent 2 x 9 (1)
142556 - Decal, Reflector Red 2 x 9 (2)

142650 - Decal, Fluorescent 2 x 9 (2)
TOP BEATER FRAME & BEARINGS

246620 - Shield, Top Beater Bearing (1)
118302 - Capscrew, Self-Tap - 3/8 x 1 (4)

117398 - Bolt, 5/16 x 4-3/4 (3)
118703 - Lock Nut, 5/16 (3)
118795 - Bolt, 5/8 x 2-1/4 (8)
118537 - Flat Washer, 5/8 F436 (8)

Note: Ensure Bearing Bolts are installed in the direction shown in this diagram.

118403 - Nut, 3/8 (16)
118503 - Lock Washer, 3/8 (16)

246618 - Frame, Top Beater (1)

117215 - Bearing Unit, Assembly (2) comes with...

IMPORTANT: After nut is properly tightened, bend tab(s) of lock ring onto nut.

117197 - Adapter Sleeve (1) (comes with nut & lock ring)

IMPORTANT: When installing, ensure adapter sleeve is locked onto shaft and is not slipping.

117195 - Housing, 4 hole (1) (comes with retainer rings 117198 - Retainer Ring)

117196 - Bearing, Insert - 2-7/16 (1)

LOWER BEATER FRAME AND GEARBOX

246880 - Frame, Beater Deck (1)

118026 - Bolt, 5/8 x 2 (4)
118514 - Flat Washer, 5/8 (4)
118508 - Lock Washer, 5/8 (4)
118407 - Nut, 5/8 (4)

Note: Models with a Serial Number from 1000-1009 require 2" thick spacers between Gearbox ends and deck frame.

Correct Snap Ring Locations

170447 - Gearbox Assembly (1) (Part Breakdown on pg. 39)

117483 - Nut, M14 (16)
117484 - Lock Washer, M14 (16)
118098 - Bolt, M14 x 50 P8.8 (16)
Rear Frame & Beater Components

BEATER CORE, PADDLE & PIN ASSEMBLIES

⚠️ NOTE: It is recommended to replace all three paddles from a row at the same time to maintain proper balance of beater assembly.

⚠️ Beater Timing Mark Location
Beaters should be timed 180° opposite each other to avoid damage caused by paddle contact.

⚠️ WARNING:
When installing/replacing complete beater assembly, ensure bottom plate timing mark positions of both beater assemblies are opposite (180°) to avoid paddle contact and damage.

⚠️ Beater Timing Mark Location
Beaters should be timed 180° opposite each other to avoid damage caused by paddle contact.

⚠️ NOTE: Wear tip paddles must be installed with tips facing rotation.

- 246656 - Beater Core Assembly - RH (1) (with CT Paddles)
- 246657 - Beater Core Assembly - LH (1) (with CT Paddles)
- 246623 - Beater Core Assembly (2) (without paddles)
- 246691 - Paddle Assembly, Hammer Head - Carbide Tip (12)
- 246693 - Wear Tip (4)
- 246805 - Paddle, Bottom Row (3)
- 246782 - Seal, Wiper - Dual Lip (2)
- 117179 - Bushing (1)
- 118027 - Bolt, 5/8 x 2 (30)
- 246628 - Pin, 2 x 7-3/4 (15)
- 118447 - Lock Nut, 5/8 (30)
- 118935 - Bolt, 5/8 x 2 1/2 GR8 (8)
- 117581 - Lock Nut, 5/8 Flanged (8)
- 246782 - Seal, Wiper - Dual Lip (2)
- 117179 - Bushing (1)
- 246625 - Paddle Assembly, Hammer Head (12)
- 246782 - Seal, Wiper - Dual Lip (2)
- 117179 - Bushing (1)

Rear Beater Gearbox Components

GEARBOX COMPONENTS

170447 - Complete Gearbox Assembly (1)

170485 - Output Hub Assembly, Complete (2)
(See Detail Below)

170449 - Spacer (1)
170460 - Ring, Threaded (1)
170454 - Washer, Notched (2)
170455 - Gear, Pinion - 13 teeth (2)
170456 - Bearing, 32212 (2)

170459 - Ring, Retaining - Ext. 70mm (1)
170453 - Ring, Threaded (1)
170452 - Shaft, Horizontal (1)
170458 - Gear, Crown - 23 teeth (1)
170457 - Bearing, 6413 (1)

170479 - Flange Spacer, Right (1)
170478 - Oil Plug, 1" NPT (1)
170474 - Gasket, Inner (2)

170475 - Flange Spacer, Left (1)
170477 - Oil Level Plug, 1" NPT (1)
170450 - Gearbox Housing, Inner (1)

170476 - Oil Plug, 1/2" NPT (1)
170451 - Gearbox Housing, Outer (2)
170453 - Ring, Threaded (1)

170497 - Flange Spacer, Outer (2)
170484 - Input Hub Assembly, Complete (1)
(See Detail Below)

170471 - Bearing, 33113 (1)
170480 - Gear, Pinion - 17 teeth (1)
170482 - Input Shaft, 1/3/4" - 20 (1)
170483 - Oil Seal, 70/110/12-DL (1)
**WARNING:** The front PTO driveline is an equal angle driveline that requires proper positioning to prevent damage or failure.

**WARNING:** The rear PTO driveline is an equal angle driveline that requires proper positioning to prevent damage or failure.

**IMPORTANT:** When attaching driveline onto shaft, tighten cut-out clutch bolt to 75 ft-lbf (102 N·m). Check and re-torque again after 2 hrs.

**Note:** May Requires PTO Holder Bracket Positioning Adjustment
Driveline Components

160371 - DRIVELINE SLIDER SHAFT, 26-36 1-3/4" 20-Spline - (Tractor to front shaft Driveline)

160370 - **OPTIONAL** DRIVELINE SLIDER SHAFT, 26-36 1-3/8" 20-Spline - (Tractor to front shaft Driveline)
Driveline Components

160372 - DRIVELINE SLIDER SHAFT, 47-64 1-3/4" 20-Spline - (Shaft Driveline)

160373 - DRIVELINE SLIDER SHAFT, 38-52 20-Spline - (Rear driveshaft to Gearbox)

Note: Cut-out Clutch bolt/taper pin needs to be checked and re-torqued to 75 ft-lbf (102 N·m) after first 2 hrs. of operation (to loosen or replace, refer to instructions in maintenance section on driveline removal)
Hydraulic Routing - Hose Clamps & Shields

2 Year
Limited Warranty - Agricultural Products

Degelman Industries LP (“Degelman”) warrants to the original purchaser of any new Degelman equipment, purchased from an authorized Degelman dealer, that the equipment will be free from defects in material and workmanship for a period of two (2) years from the date of delivery, for non-commercial use (including farm, institutional, government, and municipality) and (1) year from the date of delivery for commercial use. The obligation of Degelman to the purchaser under this warranty is limited to the repair or replacement of defective parts in the first year and to the provision, but not the installation of replacement parts in the second year. Degelman reserves the right to inspect any equipment or parts which are claimed to have been defective in material or workmanship.

This warranty limits its replacement or repair coverage to what is consistent with the warranty of Degelman’s suppliers of purchased components.

Replacement or repair parts installed in the equipment covered by this limited warranty are warranted for ninety (90) days from the date of delivery of such part or the expiration of the applicable new equipment warranty period, which ever occurs later. Warranted parts shall be provided at no cost to the user at an authorized Degelman dealer during regular working hours. Warranted replacement parts will either be replaced or rebuilt at Degelman’s discretion.

Disclaimer of implied warranties & consequential damages

This warranty shall not be interpreted to render Degelman Industries LP liable for injury, death, property damage or damages of any kind, whether direct, consequential, or contingent to property. Without limiting the generality of the foregoing, Degelman shall not be liable for damages resulting from any cause beyond its reasonable control, including, without limitation, loss of crops, any expense or loss of labour, supplies, rental machinery or loss of use.

No other warranty of any kind whatsoever, express or implied is made with respect to this sale; and all implied warranties of merchantability and fitness for a particular purpose which exceed the obligations set forth in this written warranty are hereby disclaimed and excluded from this sale. This exclusion shall not apply in any jurisdiction where it is not permitted by law.

This limited warranty shall not apply:

1. If, in the sole opinion of Degelman, the unit has been subjected to misapplication, abuse, misuse, negligence accident or incorrect off-site machine set-up.

2. To any goods that have sustained damage or deterioration attributable to a lack of routine maintenance (eg. Check and Re-torque of fastening hardware, Hydraulic fluid purities, drive train alignments, and clutch operation)

3. If parts not made or supplied by Degelman have been used in the connection with the unit, if, in the sole judgement of Degelman such use affects its performance, safety, stability or reliability.

4. If the unit has been altered or repaired outside of an authorized Degelman dealership in a manner which, in the sole judgement of Degelman, affects its performance, safety, stability or reliability.

5. To expendable or wear items such as (eg. Harrow tines, Rock Picker and Rock Rake wear teeth and replaceable bushings and pins.) and any other items that in the company’s sole judgement are a wear item.

No employee or representative of Degelman Industries LP is authorized to change this limited warranty in any way or grant any other warranty unless such change is made in writing and signed by the Degelman Service Manager.

This limited warranty is subject to any future availability of supply, which may directly affect Degelman’s ability to obtain materials or manufacture replacement parts.

Degelman reserves the right to make improvements in design or changes in specifications at any time, without incurring obligations to owners of equipment previously delivered.

This limited warranty is subject to compliance by the customer to the enclosed Retail Customer’s Responsibility Under Degelman Warranty.
Warranty

Retail Customer’s Responsibility Under Degelman Warranty.

It is the retail customer and/or Operator’s responsibility to read the Operator’s Manual, to operate, lubricate, maintain and store the equipment in accordance with all instructions and safety procedures. Failure of the operator to read the operators manual is a misuse of this equipment.

It is the retail customer and/or operators responsibility to inspect the product and to have any part(s) repaired or replaced when continued operation would cause damage or excessive wear to other parts or cause safety hazard.

It is the retail customer’s responsibility to deliver the product to the authorized Degelman dealer, from whom he purchased it, for service or replacement of defective parts, which are covered by warranty. Repairs to be submitted for warranty consideration must be made within forty-five days of failure.

It is the Retail Customer’s responsibility for any cost incurred by the dealer for hauling of the product for the purpose of performing a warranty obligation or inspection.

WARRANTY INFORMATION

Make certain the warranty registration card has been forwarded to:

Degelman Industries LP
Box 830 -272 Industrial Dr.
Regina, SK, Canada
S4P 3B1

Always give your dealer the serial number of your Degelman product when ordering parts or requesting service or other information.

The serial number is located on the machine as shown in the diagram below.  In the space provided record the model number, the serial number and the date of purchase to assist your dealer in providing you with prompt and efficient service.
